

Food Industry Applications

TKG[®] 500
TKG[®] 1000

Our materials operate in many varied and often challenging applications. An unwavering commitment has always been maintained to the highest standards of the quality, as well as for the protection of the environment in the communities in which we live and work. Food contact applications are subject to specific regulations in all major regions globally. TRAIID VILLARROYA has developed special grades ("food contact" grades) TKG®500 and TKG®1000 , which may be used for the manufacture of articles intended to come into contact with foodstuffs.

TRAID VILLARROYA manufactures a complete special range of plastics for the food industry, including cups, plates, bowls, and kitchenware. There is an emphasis on increasing the uses of various of our plastics. Our materials operate in many varied and often challenging applications. An unwavering commitment has always been maintained to the highest standards of the quality, as well as for the protection of the environment in the communities in which we live and work. The long-term business success of our products depends on our ability to ensure that our quality remains a top priority for the management and each employee. This idea is our commitment to making sustainable health a reality through innovative technology and services focused on addressing three critical needs: lowering costs, helping our customers and improving quality.

Our company is built around two core assets, its brands and its people. That's what makes working here so special. We believe that work is more than a place you go every day. It should be a place of exploration, creativity, professional growth and interpersonal relationships. It's about being inspired and motivated to achieve extraordinary things. We want our people to take pride in their work and in building brands others love. After all, it's the combined talents, skills, knowledge, experience and passion of our people that make us who we are.

Our products offers the broadest range of materials, sizes, formats and services available, from exploration and appraisal of new applications through development and production. We place strong emphasis on developing innovative technology that adds value for our customers. Precision and effort are as much a part of TRAIID's operational policy as they are an integral part of each worker. The manufacturing system is also designed to promptly handle special orders and quick turn-around, providing customers with an endless supply of first-class products.

At TR Aid, we're confronting the ever-changing marketplace by reinventing the way we do business. For products we can make better and faster, we're focusing our manufacturing operations on specialized centers of excellence around the world. For other offerings, we're building strategic global partnerships to bring customers the highest-quality products at the lowest cost. Meanwhile, we're standardizing global product platforms to provide consistency to our customers, wherever they're located. And no matter the product, no matter the supplier, we're working harder than ever to ensure the superior design and quality our customers count on.

Components machined from industrial food grade plastics offer tremendous opportunities. Because of its' light weight, cost, cleanability, strength, and wear resistance, plastics are an obvious choice for certain parts for food processing machinery but also for other things. The use of plastic components is very important where contamination is concerned. There is no worry of metals getting into food products if a part breaks or wears out.
