

Machining Plastics

the best of our materials...

Production of special parts in Advance TKG® materials.

Our materials operate in many varied and often challenging applications. An unwavering commitment has always been maintained to the highest standards of the quality, as well as for the protection of the environment in the communities in which we live and work. The long-term business success of our products depends on our ability to ensure that our quality remains a top priority for the management and each employee. This idea is our commitment to making sustainable health a reality through innovative technology and services focused on addressing three critical needs: lowering costs, helping our customers and improving quality.

Our company is built around two core assets, its brands and its people. That's what makes working here so special. We believe that work is more than a place you go every day. It should be a place of exploration, creativity, professional growth and interpersonal relationships. It's about being inspired and motivated to achieve extraordinary things. We want our people to take pride in their work and in building brands others love. After all, it's the combined talents, skills, knowledge, experience and passion of our people that make us who we are.

From our humble beginnings in 1964, the Company has grown to become one of the largest professional engineering plastic products company in the world. With operations in 40 countries, the Company distributes its plastic products in over 70 countries under some of the most well established companies in the industry. Worldwide, plastic professionals now depend upon Traid Villarroya for innovative, new solutions that advance the use of plastics and improve business for customers throughout the world.

Since 1968, we have been working for giving top quality machined parts and service to our customers worldwide.

When decisions are critical, when uncertainty adds risk, we help you form a better basis for your decisions. Our products offers the broadest range of materials, sizes, formats and services available, from exploration and appraisal of new applications through development and production. Combining field-proven testing experience with reservoir-domain expertise, our team works with you to prove reservoir potential, confirm performance, and improve field productivity. Knowledge, technical innovation and teamwork are at the center of who we are. For more than 40 years, we have focused on leveraging these assets to deliver solutions that improve our customers' performance.

We place strong emphasis on developing innovative technology that adds value for our customers. Reflecting our belief that diversity spurs creativity, collaboration, and understanding of customers' needs, our group employ people of more than 20 nationalities working in approximately 72 countries. Our employees are committed to working with our customers to create the highest level of added value. Knowledge communities and special interest groups with our organization enable teamwork and knowledge sharing unencumbered by geographic boundaries.

From designer to production line, TRAIID's sophisticated way of working provides direct control to the fully automatic CNC milling and turning machines. Around the clock, our machines produce exactly as specified and in exact quantities according to design and orders. Our production facilities are versatile and flexible. Within hours, completely different parts can be put into production. During customer seminars TRAIID has demonstrated production skill and flexibility by challenging participants to request a completely new machined part. Later that same day, the new product is in the customer's hand.

Precision and effort are as much a part of TRAIID's operational policy as they are an integral part of each worker. The manufacturing system is also designed to promptly handle special orders and quick turn-around, providing customers with an endless supply of first-class products.

Relentless pressure to increase profitability; continuous cost reduction measures; migration to advanced materials; or shortages of plasticworking expertise and manpower?.The solutions that follow are incorporated into nearly every aspect of daily life, from aerospace to food processing, medical to mining, transportation to energy, and more. After more than 50 years, we have had more than our share of breakthroughs. While we are comfortable in the role of setting industry standards, we are most proud of the innovative approach we take to continuously remain the force behind your greater productivity.

Plastics increase the efficiency and hygiene of medicine from the surgery suite to the physician's office. Plastic syringes and tubing are disposable to reduce disease transmission. Plastic intravenous blood, fluid, and medicine bags let health care workers more easily view dosages and replacement needs. Plastic heart valves and knee and hip joints save lives and make patients' lives more comfortable. Plastic prosthesis help amputees regain function and improve their quality of life. Plastic catheters and balloons allow doctors to open blocked blood vessels and insert plastic vessel supports to keep them open and dissolve harmful deposits. In addition to plastic eyeglass lenses, contact lenses, and eyeglass frames, plastics help victims of eye injuries or disease see again: silicone artificial corneas can restore patients' vision. Molded plastic hearing aids assist people with hearing loss to fully participate in conversations again.

In today's dynamic global economy, there's no standing still. Continuous innovation and decisive action are critical to stay ahead of the intensifying competition. This is the reality for every company, designer and person. And it's the driving force behind today's TRAIID worldwide. For more than five decades, TRAIID VILLARROYA has been a plastic technologies leader. Our catalog remains the industry's broadest, our products the benchmark of high quality. And we continue to provide customers with

knowledge, expertise and service that can't be matched. But we aren't satisfied—because our customers' needs keep evolving, and we're determined to help them succeed.

Today's TRAIID also is aggressively developing new products that help our customers capture emerging markets, advance environmental initiatives and more. We're even working with outside inventors to bring their ideas to market. It makes no difference where a new idea comes from, as long as it solves customers' problems. Meanwhile, as the entire industry faces a pressing skilled-worker shortage, we're taking action through our comprehensive training program that's cultivating the next generation of machining plastic experts.

At TRAIID, we're confronting the ever-changing marketplace by reinventing the way we do business. For products we can make better and faster, we're focusing our manufacturing operations on specialized centers of excellence around the world. For other offerings, we're building strategic global partnerships to bring customers the highest-quality products at the lowest cost. Meanwhile, we're standardizing global product platforms to provide consistency to our customers, wherever they're located. And no matter the product, no matter the supplier, we're working harder than ever to ensure the superior design and quality our customers count on.

And the evolution of TRAIID continues ... After all, we're more than a manufacturer. More than a distributor. We're an essential resource. Our customers' challenges keep changing, and we're helping them adapt *every step of the way*.
